"Distinct and overlapping expression patterns of ligands for
Eph-related receptor Lyrosine Kinases during mouse embryogenesis.";
Dev. Biol. 179:382-401(1996).

-I- FUNCTION: MAY FUNCTION ACTIVELY TO STIMULATE AXON FASCICULATION.

INDUCES COMPARTMENTALIZED SIGNALING WITHIN A CAVEDAE-LIKE
MEMBRANE MICRODOMAIN WHEN BOUND TO THE EXTRACELLULAR DOMAIN OF ITS
COGNATE RECEPTOR. THIS SIGNALLING EVENT REQUIRES THE ACTIVITY OF
THE FYN TYROSINE KINASE (BY SIMILARITY).

-I- SUBUNIT: BINDS TO THE RECEPTOR TYROSINE KINASES EPHA2, EPHA3 AND
EPHBI (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR IT

NOTE: This is a "working draft" sequence. It currently consists of 50 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 72 conties. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * trus of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                             The sequence is that of a clone encoding hek-L protein, a protein that can bind hek (a cell surface receptor tyrosine kinase). Hek-L is the first known ligand for hek and can be used to study cellular processes regulated by hek (which may be involved in tumorigenesis). It is also an immunogen for antibody production, as a reagent for detecting hek or hek-L in in vitro assays, to determine binding of hek proteins, to purify hek proteins, and to carry diagnostic or cytotoxic agents to particular leukaemia cells that express the hek seningen. Hek-L also binds the elk tyrosine kinase receptors.

The invention relates to human protease polypeptides and polynucleotides which are expressed in the placenta, lung, ovary, colon, kidney, thyroid gland, prostate, eye and leucocyte. These sequences can be used as models for the development of human therapeutic targets, in the identification of therapeutic proteins and serve as targets for the development of drugs that modulate protease activity in cells and tissues expressing protease. The nucleic acid molecules are also useful in biological assays for detecting changes in protease nucleic acid expression and for producing proteases, which are important for regulating cell proliferation, differentiation, and signalling processes. This sequence represents genomic DNA encoding a human protease polypeptide.

                                                                                                                        Murine and chicken EPH receptor ligand, {\rm Elf}-1 - useful in diagnosis and treatment of disorders associated with the {\rm Elf}-1 gene, e.g.
                                                                                                                                                                                                                               Elf-1 (AAR94766), involved in the formation and maintenance of ordered spatial arrangements of differentiated tissue. It was obtd. from a day-3 chick embryo cDNA library using mouse Elf-1 cDNA (see AAT15008) as probe. The cDNA can be used for the prodn of recombinant Elf-1, in the breeding of transgenic animals, for the design of diagnostic probes, and for gene (or antisense) therapy of cellular and tissue disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             165 GGAGCTGGGCCTCAACGATTACCTAGACATTGTCTGCCCCCACTACGAAGGCCCAGGGCC

The present sequence encodes an avian EPH receptor ligand designated Elf-1. This ligand can bind to both mek-4 and sek-AP. Elf-1 is a physosine klaase ligand, which is linked to the membrane through a phosphatidylinositol linkage. It shares some homology to 2 other EPH receptor ligands, B61 and LERK-2. The Elf-1 protein modulates proliferation, differentiation and survival of EPH receptor-expressing cells by stimulating or antagonisming intracellular signalling mediated by the EPH receptor. Typical of many potential applications are increasing survival of meuronal cells in culture (e.g. where intended for transplantation), also therapeutically in increase neuron survival e.g. treatment of Alzhemmer's or Parkinson's diseases), to prevent nervous system and lymphatic tumours, to induce differentiation of hepatocytes to form an artificial liver, to induce cartilage and bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              339 CCATGTTCAATTCTCAGAGAGATTCAGGGGTTCACACCTTTCTCCCTGGGTTTGAGTT 398

Ef1-2 is useful for identifying other ligands for Ehk-1, -2, -3, Eck and Elk receptors. The ligands are useful in promoting a differential function and/or influencing the phenotye, such as growth and/or proliferation, of receptor bearing cells. They may be used in the diagnosis, and treatment of neurological disorders.
